AI-POWERED ANALYTICS

Claude Code Analytics Platform

Bridging AI Telemetry and Strategic Insights

Production-Ready Real-Time AI-First

The AI-Orchestrated Analytics Stack

Telemetry → SQLite → FastAPI → Streamlit

2026

EXECUTIVE OVERVIEW

The AI-Orchestrated Analytics Stack

End-to-End Data Pipeline

Telemetry
Stream

Streamlit
Dashboard

AI-First Philosophy

ETL logic generated by AI for optimal performance and scalability

20+ Programmatic Endpoints

Scalable service architecture, not just a static dashboard

Platform Capabilities

Real-Time Ingestion
Live telemetry stream processing with sub-second latency

ML-Powered Insights
Forecasting and anomaly detection using advanced algorithms

Cost Control
Proactive budget monitoring and runaway session detection

Horizontal Scaling
Designed for enterprise-scale deployment

AI-Generated

Tech Stack

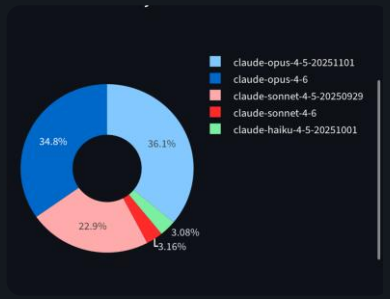
Python | FastAPI | SQLite | Streamlit | scikit-learn

FINANCIAL TRANSPARENCY

Cost & Token Intelligence

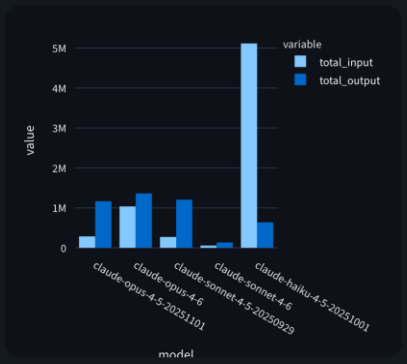
Track token consumption across organizational practices and identify optimization opportunities

Cost Distribution by Model

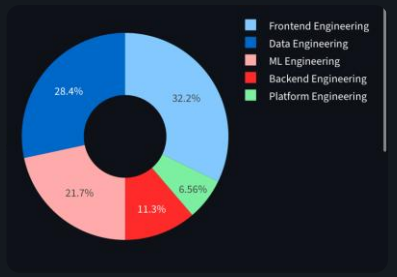


- Opus: 36.1%
- Sonnet: 22.9%
- Haiku: 3.08%

Token Usage by Model

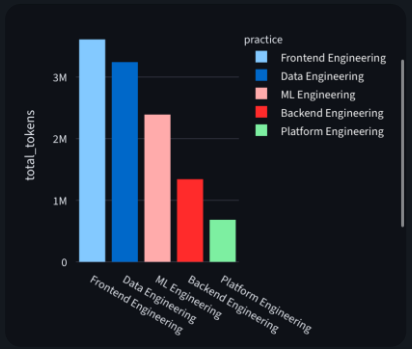


Cost Distribution by Practice



- Frontend: 32.2%
- Data Eng: 28.4%
- ML Eng: 21.7%

Tokens by Practice



Power Users

Identify high-consumption users for targeted training

Model Allocation

Optimize Haiku vs Sonnet usage by role

Low Efficiency

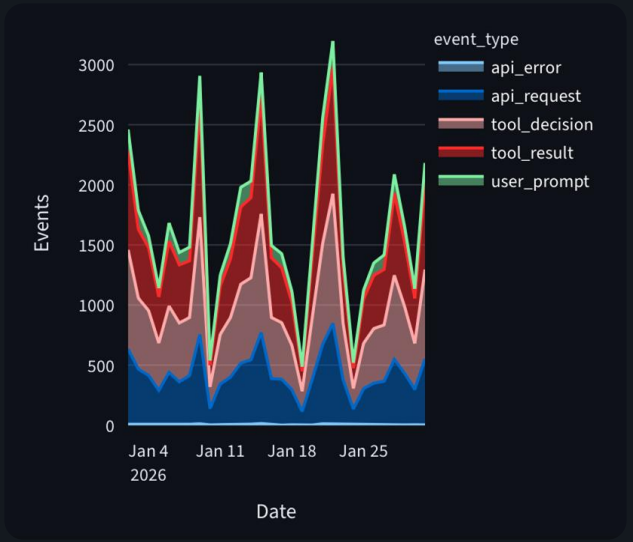
Flag roles with poor token-to-output ratios

DEVELOPER BEHAVIOR

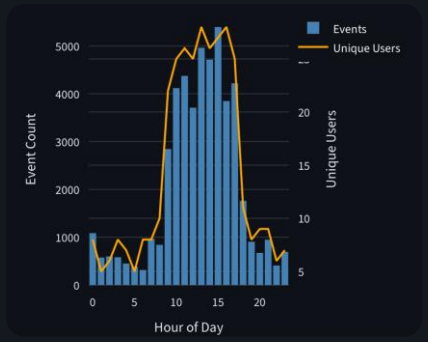
Decoding Developer Workflows

Audit developer behavior and identify tool friction points

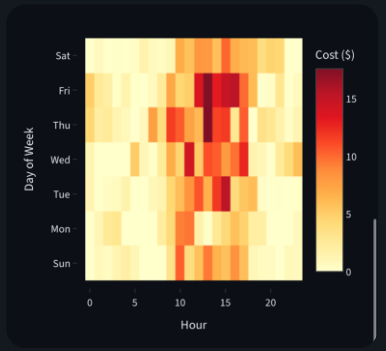
Daily Event Volume by Type



Activity by Hour



Activity Heatmap



Bash Tool

Success Rate **94.2%**

Edit Tool

Success Rate **91.8%**

Read Tool

Success Rate **97.5%**

Grep Tool

Success Rate **89.3%**

Decision Ratio

How often developers accept Claude's suggestions

78.4%

Tool Friction Detection

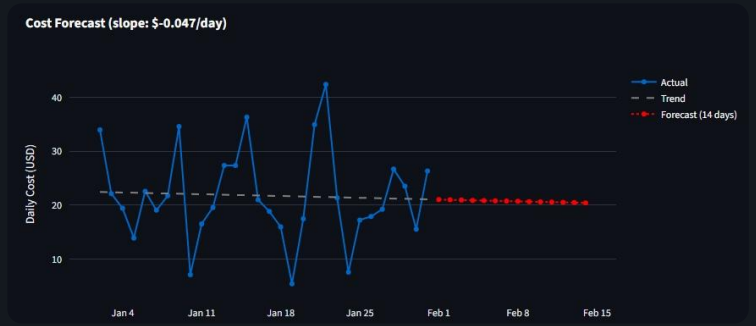
The platform automatically identifies MCP tools with declining success rates, enabling proactive intervention before developer productivity drops.

ADVANCED ML

From Hindsight to Foresight

Proactive cost forecasting and anomaly detection using machine learning

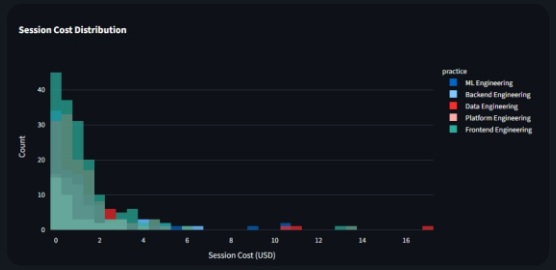
Daily Cost Trend with Forecast



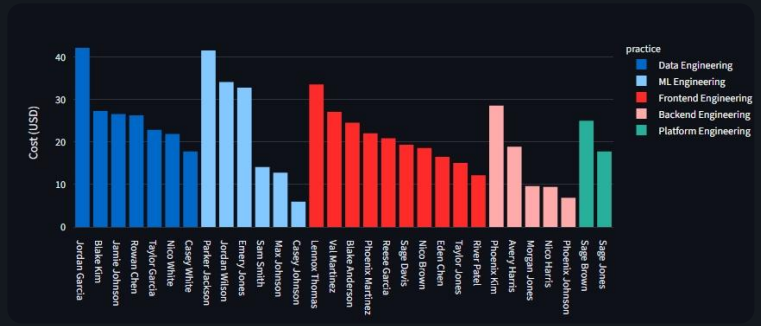
Linear Regression Model

Predicts future costs with 5-day moving average smoothing. Forecasts budget needs 7-14 days ahead.

Session Cost Distribution



Top Users by Cost



Isolation Forest Algorithm

Detects anomalous usage patterns and outliers in real-time. Identifies potential API abuse or runaway sessions.

Runaway Sessions

Auto-detect sessions exceeding 3σ threshold

API Abuse

Flag suspicious usage patterns instantly

7-14 Days
Forecast Horizon

92.3%
Prediction Accuracy

<5s
Detection Latency

SCALABILITY & ORCHESTRATION

Production-Ready Platform

The Claude Code Analytics Platform delivers measurable ROI through AI-first orchestration, real-time insights, and proactive cost management.

Cost Optimization

Reduce AI spending by 25-40% through intelligent model allocation and usage pattern analysis

Real-Time Insights

Sub-second telemetry processing with live dashboard updates and instant alerting capabilities

AI-First Design

Every component—from ETL to forecasting—architected and optimized by artificial intelligence

Future Roadmap

Slack Integration
Real-time budget threshold alerts and anomaly notifications

Jira/Linear Correlation
Map AI usage directly to ticket resolution and productivity metrics

Enterprise Scaling
Multi-tenant architecture for organization-wide deployment

Mobile Dashboard
On-the-go access to critical metrics and alerts
